Professional Experience

Tekonika Technologies

Bangalore, Karnataka

FullStack Developer

Apr 2024 - Present

- Built a **data-driven Sticky Location system** to improve pickup accuracy by analyzing **1M+ ride records** using Python, SQL, and **clustering algorithm**. The solution **auto-suggests system-verified pickup points** based on order density and historical accuracy, improving **high accuracy pickups (HAPs)** from **75% to 85%**, impacting **~40%** of gross orders and significantly reducing pickup deviations, **post-acceptance cancellations**, while enhancing **customer satisfaction**.
- Designed and Developed a **customer consideration signal** by analyzing **13-week rolling ride data** using Python and SQL, segmenting users into **5 consistency segments and 3 intent levels** based on **recency, active-day patterns, and ride intensity**. This improved **retention by 5%**, enabled **hyper-targeted marketing**, and helped align **supply allocation with true customer demand**.

Poltergeist Pay Technologies

Bangalore, Karnataka

FullStack Developer

Aug 2022 - Mar 2024

- Developed and deployed an end-to-end **cost optimization** solution using **Python, Pandas, Numpy, MySQL** and **AWS S3**, resulting in a consistent monthly savings of **INR 3–4 Cr** also created an **interactive dashboard** for real-time cost monitoring and message delivery rates, providing valuable insights for informed decision-making.
- Built a device scraping script from scratch using **Python, Pandas, MySQL**, which helped tech team for debugging and fixing some critical device specific issues, **attained 2% improvement** in VKYC approval rate additionally, the script **enhanced** operational **efficiency** also built KYC performance dashboard which helps team understanding and monitoring the agent specific issues on a daily basis.

Technical Skills

Programming Languages :

JavaScript, TypeScript, Python, SQL

Frontend :

HTML5, CSS3, React.js, Next.js, Tailwind CSS, shadcn/ui, Material UI (MUI), Redux Toolkit (RTK Query), Zustand

Backend :

Node.js, Express.js, MongoDB, REST APIs

Other Skills :

Redis, MQTT, Apache Kafka, Docker, AI/ML, RAG, Git,

Education

Sikkim Manipal Institute of Technology

Jul 2022

Master of Computer Application

CGPA : 8.86

Projects

Buy Books

Python, Machine Learning

- Implemented a Food Delivery Time Prediction regression model objective was to predict the accurate delivery time, performed **EDA, Feature engineering** and finally selected **Xgboost Regressor**, with an accuracy of **91%**.
- Implemented a Food Delivery Time Prediction regression model objective was to predict the accurate delivery time, performed **EDA, Feature engineering** and finally selected **Xgboost Regressor**, with an accuracy of **91%**.
